

Abraham Mormontoy

aem19@sfu.ca | +1 (672) 727-4207 | [Personal Website](#) | [LinkedIn](#) | [GitHub](#) | Burnaby, BC

TECHNICAL SKILLS

Languages: C/C++, HTML/CSS, Java, Python, JavaScript, TypeScript,

Frameworks/Libraries: React, Tailwind CSS, Next.js, SQL Pandas/NumPy, Matplotlib, SciKit-Learn

Tools: Git, GitHub, Docker, Vs Code, IntelliJ, Figma, Jupyter Notebook/Lab, Arch/Linux, MS Office

PROJECTS

[Windows95 Personal Portfolio](#) | JavaScript, ReactJS, Tailwind CSS, Figma

Personal Project | Apr 2026 - May 2026 | [Live](#)

- Build a frontend personal portfolio website based in the Windows 95 style to showcase my projects, skills, and contact information using modern design and web technologies.
- Developed a responsive multi-window desktop interface with draggable tabs, simultaneous tab management and EmailJS for contact.
- Implemented a dynamic theme system with light and dark modes with a responsive animated background.

[Pet Mind Reader](#) | TypeScript, ReactJS, Tailwind CSS, Next.js

SFU Surge Sillihacks | April 2026 | [Live](#)

- Develop a web application where you upload a photo with a pet or multiple pets and it generates a humorous caption of what the pet/s might be thinking.
- The app uses Next.js API routes and the Google Generative AI SDK to process images and dynamically generate the captions while supporting JPEG, PNG, GIF and WEBP up to 10 MB.
- Collaborated in a group of 4 implementing a responsive silly design and features following the hackathon theme of fun, chaotic and unhinged ideas.

[SFU Fitness Tracker](#) | Java, Spring Boot, JavaScript, HTML/CSS, SQL

SFU Surge Stormhacks | Dec 2025

- Develop in a group of 4 a fitness tracking full stack web application with trainer and client user registration and log in system with encryption.
- Integrated client-trainer data communication tracking exercise preference, long-term and short-term goals, availability and information from personal to certificates.
- Implemented dashboard for both clients and trainers so they can see the availability and the possibility to book a session if possible.

[Dog Breed Classifier](#) | Python, Torch/Torchvision, Pandas/Numpy, Matplotlib, Scikit-Learn, OpenCV

SFU CMPT 310 - Introduction to Artificial Intelligence | Jan 2026 - Apr 2026

- Build a Dog Breed Image Classifier model using a Convolutional Neural Network that gives the top 3 most likely breeds of a dog picture achieving an accuracy of 80% for top-1 and 94% for top-3
- The model was trained using transfer learning with a pre-trained ResNet-18 model and the Standoft Dogs Database using only 50 breeds with 150 images each supporting jpg, jpeg and png formats.
- Training was performed over 15 epochs with a CUDA-accelerated GPU and backpropagation with reports of each phase of the development process.

[Daycare Inferno](#) | Java, Swing, Awt, JUnit

SFU CMPT 276 - Introduction to Software Engineering | Jan - Apr 2026

- Build a 2D arcade-style maze game on a 64x64 grid architecture with collision detection, game states like menu or pause, timer and win/loss conditions.
- Develop an AI-driven enemy using Greedy Search algorithms, alongside event-driven scoring with random spawning at the start, special time limited rewards and stun obstacles.
- Applied Agile principles within a team of 4, utilizing Maven for build management, Git for version control and JUnit for unit testing prioritizing sprint reviews, clean code, communication and reports of the development process.

EDUCATION

Simon Fraser University - Faculty of Applied Sciences

Bachelor of Science in Computer Science

Burnaby, BC

Expected Grad, Dec 2028

- **Related Coursework:** Data Structures & Programming, Computer Systems, Systems Programming, Introduction to Software Engineering, Introduction to Artificial Intelligence, Data Communications and Networking, Database Systems I, Statistics & Applications, Business Statistics
